ABOUT THE SEMINAR

Advancement of Very Large Scale Integration (VLSI) technology is the driving force for next generation wireless communications. Every generation of VLSI technology offers a new opportunity for more powerful and smaller wireless devices, but it also poses a technical challenge to curb ever growing technology. More than 70% of the world's population has gone mobile using stylish and excellent featured handsets, tablets, smart phones with GPS devices and wireless terminals. These devices are delivered with Wi-Fi, Bluetooth, 3G/4G services and other advanced communications technologies. With this growing pace of

communication and globalization, mobile and wireless technology has become a fire wave of the future to benefit every aspect of our life including business, personal, education, medical, entertainment as well as global communication. This seminar will host invited talks and create an unprecedented opportunity for fellow researchers, academicians and professionals working in the field of VLSI Design for Wireless Communication to share their research findings.

TOPICS COVERED

- VLSI design for cognitive wireless networks
- VLSI architecture for multi user wireless system
- VLSI applications in mobile phones
- Antenna effect in VLSI Design
