Registration •Pre Registration Google form link : https://forms.gle/BF8wsQpSvRL9gqCq6 •No Registration Fee. •The number of participants is limited and the selection will be based on first come –first come basis. •Selected candidates will be informed through e-mail. •Participant can register for more than one phase and Certificate will be issued for each phases.																				
Eligibility •The faculty members from AICTE approved institutions , Research Scholars and persons from industry are eligible for participation. Minimum 80 % attendance and the successful completion of MCQ test is eligible for certification.																				

Topics Covered :

- Introduction to Remote sensing
- Understanding the basic concepts of supervised and unsupervised techniques.
- Demonstration of Deep learning algorithms in Remote sensing
- Application of remote sensing techniques
- Case studies discussion

Sethu Institute of Technology, the brainchild of our Founder & Chairman, Mr. S. Mohamed Jaleel, has been rendering its noble service since 1995 catering to the sustained growth of the educationally, industrially and economically backward rural areas. The college started with 180 students in the year 1995 with three UG Programmes has recorded a stupendous growth of expanding to the strength of 4800 students with 11 UG Programmes and 5 Post Graduate Programmes.

About department:

The department shares the mission and vision of the institute in imparting quality education to the students. The department has accomplished several laurels in fulfilling its mission to pursue excellence. Highly sophisticated and the latest configuration computers were installed in various laboratories to cater to the students quest for knowledge. All the facilities were provided to the students and faculty members to keep abreast of the latest technologies. It also promotes active industry-institute collaboration by identifying areas of interest and taking part in sponsored research projects. The department offers undergraduate, postgraduate and Ph.d degree programmes.

About STTP:

Satellite remote sensing technology is one of the most modern, sophisticated, cost effective and useful technologies noted for its generic and global coverage capability. Such technologies observe Earth on a daily basis and acquires enormous amount of images. To store and handle such huge images and to obtain meaningful information from such images, sophisticated techniques like Deep learning can be employed. Deep learning techniques are extremely superior for handling the complex computational tasks because it automatically learns features from a huge amount of data instead of tailoring features by hand. Hence the deep learning methods can be effectively utilized in large scale image recognition, object detection and semantic segmentation of remote sensing images.

Objectives of STTP:

Participants will be able to

- Apply the knowledge of deep learning in remote sensing.
- Apply the interactive tools of remote sensing.
- Identify the deep learning algorithms which are more appropriate for various types of learning tasks in remote sensing.
- Implement deep learning algorithms and solve real-world problems in remote sensing.

Data and Related Definitions

- Data are recorded measurements, generated by humans and/or machines and stored in structured or unstructured formats.
- Measurements: numbers assigned to particular attributes or characteristic of a variable, through a standard process.
- Variables: characteristic of any entity being studied that is capable of taking on different values.
- Types of data: Categorical (category) and numerical (number or numerical indication of category).
- Levels of data: nominal, ordinal, interval and ratio
- Data/dataset formats: .csv, .xls, .txt, etc.

Data Analysis and Data Analytics

- Data helps in: (i) evaluating the performance, (ii) making better decisions, and (iii) improving the processes.
- Analytics is different from analysis; Analysis is exploring past events whereas analytics is exploring potential future events.
